                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a chimeric protein, which contains an N-terminal fragment of human growth hormone (hGH) of the sequence given in AAP42885, a cleavable peptide linker (AAY4285), and a human insulin precursor comprising insulin A and B chains (AAY42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (IMC) for the insulin precursor, enabling it to fold correctly. The cleavable ceptide linker has a C-terminal Arg residue which enables the hGH portion of the chimeric protein and provise human insulin via an hGH-proinsulin chimeric protein can provise human insulin via an hGH-proinsulin chimeric protein can provise human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but sopuences from intracellular degradation by a microorganism host, but sopuences from intracellular degradation by a microorganism host, but sopuences from intracellular degradation by a microorganism host, but solubility of the fusion protein and decrease the interactions among the fusion proteins, thus allowing folding of the recodural steps of cyanogen bromide cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbert
                                                                                                                                                  ..

```
N-terminal end (1st region), a 3 amino acid sequence representing thrombin recognition site, and human beta nerve growth factor (beta-NGF) at the C-terminal. Beta-NGF can be used to control geriatric dementia and ether nervous disorders, and can be released from the fusion process by incubation with thrombin (see AAN90577-8, AAP91034,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human nerve growth factor gene encoding fusion protein having cleavage site for thrombin, useful for treating geriatric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human nerve growth factor and human growth hormone fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 261;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human nerve growth factor: lusion protein; thrombin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           XAX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel human anti-anglogenic peptides derived from 10 to 150 consecutive amino acids selected from the N-terminal end of from 10 to 150 consecutive amino acids selected from the N-terminal end of from 10 to 150 consecutive amino acids selected from the N-terminal end of formone variant (hGH-V), or human probactin. Such peptides (i) inhibit capillary endothelial cell proliferation and organisation (ii) inhibit angiogenesis in chick choice lantoin membrane and (ii) binds to at angiogenesis in chick choice lantoin membrane and (iii) binds to at angiogenesis in chick choice lantoin does not bind nearth (ii) binds to at diagonating prequancy. The prolactin or hGH-V. The invention disc describes a method for diagnosing a probable abnormality of placental vascularisation of a patient or growth in a patient or formation or growth in a patient or for peptides can be used for prevention or growth in a patient or for peptides can be used for prevention arthritic such as rheumatoid arthritis, atheroscitative relinopathy such as those pocurring carthritis, atheroscitative relinopathy such as those pocurring such as importing your acidative relinopathy, macular degeneration, granulations such as those pocurring such as hypotytrophic scars or keloid scars, necowasciar glaucoma, collar the process.
                                                                                                                                  Human; anti-anglogente: prolactin; placental lactonen; hit; angloseness; growth hormone; hGB; hGB-V; capiliary endothelial cell proliteration; blacental vascularisation; prenancy; incentent, arribogene diseased; tumour; inhibitor; malignant, anglofibroma; arteriovenous malignant; anglofibroma; arteriovenous malignant; anglofibroma; arteriovenous malignant; ordinopathy; mentat dependantisation; granulation; glancoma; ochica; uveklis; iractine; osiariweher synifone; psoriasis; fibroplasia; scieroderma; Kaposi's sateoma; vascular adhesion; quene therapy; pre-eclampsia; intrastictine growth retardation; placental dysfunction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pyogenic glaucoma, recrolental fibrioplasia. Sciencederra, Solid turours, Kaposi's sarcoma, trachoma, vascular adhosions, chronic variosse ulcers. leukaemia, and reproductive disorders such as follicular and luteal cysta and choriocarcinoma. They can also be used as scitracceptive agents. INA encoding the peptides can be used in gene therapy. The measurement of abnormal levels of N-terminal fragments of hGB, FGH-V, prolactic or hEC can be used in assays for impairment of vascular development associated with pre-eclampsia, intrauterine growth retardation, and placental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New anti-angiogenic peptides - comprise N-terminal tragments of human placental lactogen, human growth hormone, growth hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 20; Length 192:

```
The protein is produced by fusing DNA encoding BDF (IL-) with DNA encoding BSF-2 (IL-5) and ligating the product into an expression vector Sec also AAR05311 and AAR05313.
                                                                               can be produced as this fusion protein. It is purified by contacting a gel having a cation exchange qp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia. (Updated on 25-MAR-2063 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                          interleukin-6; B-cell differentiation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Prepn. of human B-cell differentiation factor - from specified DNA sequence segment, by recombinant DNA technique, gives protein of specified amino acid sequence.

The polypeptide (AAFB1226) with somatomedia-like activity and the DNA (AANBF05) emcoding it are claimed. A Met residual gp. may be added to the N-terminal. The polypeptide acts on the bone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is easily extracted from bacterial culture medium and retined for use as a bone growth accelerator.
                                                                                                                 Recombinant human growth hormone having collagenase recognition region
                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Pred. No. is the number of results predicted by charce to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete 169-1. It stimulates both the differentiation and proliferation of myobjasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and proliferation of myoblasts. It also stimulates

Strangments of sei whale (Balaincoptera borealis) somatorropin.":

Bioorg. Khim. 4:1589-1599(1978)

-1-FUKCTION: Plays an important role in growth control. I.s major role in stimulating body growth is a stimulating to secrete igfort. It stimulatios both the other tissues to secrete igfor. It stimulatios both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in miscle and other

This SWISS-PROT entry is copyright. It is produced through a cultabase-then between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions in its use by non-profit institutions as inong as its content is in to why modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (see http://www.tsb-sib.ch/anneurory or send an email to license@lsb-sib.ch).
FUNCTION: Plays an important tole is growth routed. Its major role in stimulating body growth is to slimmiate the liver and other tissues to screeke 10F-1. It stimulates both the stimulation and proliferation of myoplasts. It also stimulates amino acid uptake and proliferation of myoplasts. It also stimulates amino acid uptake and proliferation of myoplasts. It also stimulates tissues.

SUBJURIAN LOCALION: Serveted.
